

// We develop software with passion!

With our software, banks can execute transactions faster, airports can provide new digital services for their passengers, car manufacturers can produce more effectively, or telecommunications companies can roll out the new 5G technology smoothly. We offer individual development opportunities and exciting tasks in an international environment.

We are looking for a

// Junior Software Developer (m/f/d)

to strengthen our team in Timisoara. Shape the digital future with us!

Responsibilities:

- You will design and implement features in modern web applications
- You will ensure the highest possible quality of our software solution through regular testing and contribute to the optimization of our systems to break innovative ground
- You will have the opportunity to contribute to improve the software design and processes
- You appreciate the advantages of working in an agile team and like to share your knowledge with your team
- During the training period, you always have a colleague at your side as an experienced mentor
- You will receive an individual training package with technological, technical and personality-related content
- You have the opportunity to develop further as a software architect (m/f/d) or lead developer (m/f/d)

Requirements:

- You have a degree, alternatively an apprenticeship in the field of computer science or comparable, in practice acquired knowledge
- You have the interest and the will to learn new things every day and to continuously develop yourself further
- Experience in frontend development with Angular 13 framework, Redux, Typescript, CSS/SCSS, HTML is a plus
- You bring along first practical knowledge in developing and implementing features to support user interface concepts
- You are a reliable team player with a high understanding of quality and enjoy working in diverse teams
- A very good knowledge of written and spoken English
