

// We develop software with passion!

With our software, banks can execute transactions faster, airports can provide new digital services for their passengers, car manufacturers can produce more effectively, or telecommunications companies can roll out the new 5G technology smoothly. We offer individual development opportunities and exciting tasks in an international environment.

We are looking for a

// QA Engineer Automation (m/f/d)

to strengthen our team in Timisoara. Shape the digital future with us!

Responsibilities:

- You play a central role in enabling our development teams to deliver faster releases with convincing quality
- You are responsible for designing, planning and implementing automated API & UI tests
- With your passion for quality, you achieve the continuous improvement of our CI environment, QA processes as well as deployed frameworks and technologies
- By analyzing the test results, you contribute to higher transparency of the quality of our software
- With your expertise you coach our developers and product owners in improving their software quality skills

Requirements:

- You have a degree, alternatively an apprenticeship in the field of computer science or comparable, in practice acquired knowledge
- You have experience in the quality assurance of software and are confident in the use of common methods and procedures for manual and automated testing
- You are familiar with test automation and test management tools
- You have programming experience in Java or a comparable object-oriented programming language
- ISTQB certification is an advantage
- You have analytical and conceptual thinking and love to act on your own responsibility
- A very good knowledge of written and spoken English
